electromagnetic theory has been a basic subject taught for more than a century to physics students but not to the electrical engineering student before the second world war the engineer was well grounded in circuit theory but was notoriously weak in field theory by and large he might have heard of maxwell s equations but he certainly did not use them since the second world war many factors have greatly changed the engineer s outlook particularly the astonishing advances in electronics in communications particularly microwaves and more recently in solid state devices consequently a basic course in electromagnetics and applications has been included in most first degree courses in electrical and electronic engineering since about 1950 the many earlier excellent texts available were unsuitable for engineering courses in electromagnetics for two reasons first they had been written from the point of view of the physicist being more concerned with basic principles than with applications second the introduction of si rationalised mks units meant that these earlier texts needed to be revised consequently the new texts in this
