there is little dispute that over the last ten years far greater recognition has been accorded to global responsibility for the environment and as a consequence a wider acceptance in the developed world of the us model of strict liability in respect of environmental harm this volume presents the widespread and informed debate on the subject undertaken

by the environmental law committee of the iba's section on business law the philosophical and economic concept of sustainable development is addressed as is the response required from financial and political institutions the role of international agencies is examined regional perspectives on such liability are given europe north america asia africa and australasia and insurance indemnities non fault liability and environmental impact assessment are evaluated as means of securing responsibility the effectiveness of enforcement an area of potentially far reaching legislation across a range of jurisdictions is closely examined and clear developments and trends are identified the implications of liability continue to involve corporate and banking lawyers and insurance litigators surely placing upon the environmental lawyer an educative and pivotal place in the promotion of sustainable development and growth the volume reproduces the edited and revised papers of the committee's seventh residential seminar held in montreux june 1990 and faithfully reflects the wide range of expertise brought to bear on the subject

all us fossil fueled power plants coming on line after 1977 must meet standards for the prevention of significant deterioration of air quality as set forth in the 1977 clean air act amendments an analysis of the short term 24 h or less air quality impact of stack disposed effluents from proposed power plants is presented closed form solutions to the gaussian plume equation are developed for worst case meteorology for 3 h and 24 h situations the modeling technique uses a universal relationship for stack height based on good engineering practice requirements and shows that the resulting ground level concentrations are virtually independent of power plant size within the meteorological constraints the important parameters then become terrain elevation and degree of pollution control the use of worst case meteorology obviates the need for a detailed meteorological data base it is necessary only to check that the worst case conditions are in fact reasonable for the location in question a site specific consideration
