written by a world renowned expert on programming methodology and the winner of the 2008 turing award this book shows how to build production quality programs programs that are reliable easy to maintain and quick to modify its emphasis is on modular program construction how to get the modules right and how to organize a program as a collection of modules the book presents a methodology effective for either an individual programmer who may be writing a small program or a single module in a larger one or a software engineer who may be part of a team developing a complex program comprised of many modules both audiences will acquire a solid foundation for object oriented program design and component based software development from this methodology because each module in a program corresponds to an abstraction such as a collection of documents or a routine to search the collection for documents of interest the book first explains the kinds of abstractions most useful to programmers procedures iteration abstractions and most critically data abstractions indeed the author treats data abstraction as the central paradigm in object oriented program design and implementation the author also shows with numerous examples how to develop informal specifications that define these abstractions specifications that describe what the modules do and then discusses how to implement the modules so that they do what they are supposed to do with acceptable performance other topics discussed include encapsulation and the need for an implementation to provide the behavior defined by the specification tradeoffs between simplicity and performance techniques to help readers of code understand and reason about it focusing on such
