Over the past three decades or so research on machine learning and data mining has led to a wide variety of algorithms that learn general functions from experience as machine learning is maturing it has begun to make the successful transition from academic research to various practical applications generic techniques such as decision trees and artificial neural networks for example are now being used in various commercial and industrial applications learning to learn is an exciting new research direction within machine learning similar to traditional machine learning algorithms the methods described in learning to learn induce general functions from experience however the book investigates algorithms that can change the way they generalize i e practice the task of learning itself and improve on it to illustrate the utility of learning to learn it is worthwhile comparing machine learning with human learning humans encounter a continual stream of learning tasks they do not just learn concepts or motor skills they also learn bias i e they learn how to generalize as a result humans are often able to generalize correctly from extremely few examples often just a single example suffices to teach us a new thing a deeper understanding of computer programs that improve their ability to learn can have a large practical impact on the field of machine learning and beyond in recent years the field has made significant progress towards a theory of learning to learn along with practical new algorithms some of which led to impressive results in real world applications learning to learn provides a survey of some of the most exciting new research approaches written by leading researchers in the field its objective is to investigate the utility and feasibility of computer programs that can learn how to learn both from a practical and a theoretical point of view

The parameter estimation and hypothesis testing are the basic tools in statistical inference these techniques occur in many applications of data processing and methods of monte carlo have become an essential tool to assess performance for pedagogical purposes the book includes several computational problems and exercices to prevent

students from getting stuck on exercises detailed corrections are provided

This open access book constitutes the proceedings of the 18th international conference on intelligent data analysis ida 2020 held in konstanz germany in april 2020 the 45 full papers presented in this volume were carefully reviewed and selected from 114 submissions advancing intelligent data analysis requires novel potentially game changing ideas ida s mission is to promote ideas over performance a solid motivation can be as convincing as exhaustive empirical evaluation

This book is the first of three volumes that illustrate the concept of social networks from a computational point of view the book contains contributions from a international selection of world class experts with a specific focus on practical tools applications and open avenues for further research the other two volumes review issues of security and privacy and mining and visualization in csns topics and features presents the latest advances in csns and illustrates how organizations can gain a competitive advantage by applying these ideas in real world scenarios discusses the design and use of a wide range of computational tools and software for social network analysis describes simulations of social networks the representation and analysis of social networks and the use of semantic networks in knowledge discovery and visualization provides experience reports survey articles and intelligence techniques and theories relating to specific problems in networktechnology

Filled with full color pages engaging activities and colorful learning stickers they follow national standardized test formats such as the california achievement test the iowa test of basic skills and the stanford achievement test they also include a skills checklist for parents to determine their child s needs pull out storybooks for preschool math and reading language skills enhance learning

This book presents the proceedings of the 24th european conference on artificial intelligence ecai 2020 held in santiago de compostela spain from 29 august to 8 september 2020 the conference was postponed from june and much of it conducted online due to the covid 19 restrictions the conference is one of the principal occasions for researchers and practitioners of ai to meet and discuss the latest trends and challenges in all fields of ai and to demonstrate innovative applications and uses of advanced ai technology the book also includes the proceedings of the 10th conference on prestigious applications of artificial intelligence pais 2020 held at the same time a record number of more than 1 700 submissions was received for ecai 2020 of which 1 443 were reviewed of these 361 full papers and 36 highlight papers were accepted an acceptance rate of 25 for full papers and 45 for highlight papers the book is divided into three sections ecai full papers ecai highlight papers and pais papers the topics of these papers cover all aspects of ai including agent based and multi agent systems computational intelligence constraints and satisfiability games and virtual environments heuristic search human aspects in ai information retrieval and filtering knowledge representation and reasoning machine learning multidisciplinary topics and applications natural language processing planning and scheduling robotics safe explainable and trustworthy ai semantic technologies uncertainty in ai and vision the book will be of interest to all those whose work involves the use of ai technology
