sea ice physics and remote sensing addresses experiences acquired mainly in Canada by researchers in the fields of ice physics and growth history in relation to its polycrystalline structure as well as ice parameters retrieval from remote sensing observations the volume describes processes operating at the macro and microscale e.g. brine entrapment in sea ice crystallographic texture of ice types brine drainage mechanisms etc the information is supported by high quality photographs of ice thin sections prepared from cores of different ice types all obtained by leading experts during field experiments in the 1970s through the 1990s using photographic cameras and scanning microscopy in addition this volume presents techniques to retrieve a suite of sea ice parameters e.g. ice type concentration extent thickness surface temperature surface deformation etc from space borne and airborne sensor data the breadth of the material on this subject is designed to appeal to researchers and users of remote sensing data who want to develop quick familiarity with the capabilities of this technology or detailed knowledge about major techniques for retrieval of key ice parameters volume highlights include detailed crystallographic classification of natural sea ice the key information from which information about ice growth conditions can be inferred many examples are presented with material to support qualitative and quantitative interpretation of the data methods developed for revealing microstructural characteristics of sea ice and performing forensic investigations data sets on radiative properties and satellite observations of sea ice its snow cover and surrounding open water methods of retrieval of ice surface features and geophysical parameters from remote sensing observations with a focus on critical issues such as the suitability of different sensors for different tasks and data synergism sea ice physics and remote sensing is intended for a variety of sea ice audiences interested in different aspects of ice related to physics geophysics remote sensing operational monitoring mechanics and cryospheric sciences

since 1982 our ever expanding group of investigators has been meeting in exotic parts of the world to discuss aspects of three enzyme systems the 1996

meeting was no exception nearly 90 scientists from 15 countries met in the small city of deadwood south dakota for four days of stimulating talks and posters and incredible scenery once more this meeting reflected the changing trends in biochemical research at the 1982 meeting most of the speakers discussed isolating new enzymes and trying to characterize them at this meeting many speakers discussed interpretations of three dimensional structure or regulatory elements of the genes controlling for the tissue specific expression of the enzyme hopefully readers will find the proceedings of the meeting to be of interest though they reflect the scientific information that was presented at the meeting they do not indicate the level of personal interactions that went on during the meeting once again the willingness of the participants to discuss unpublished data and to share thoughts about the future directions of their research helped make this like our previous seven meetings a special scientific experience for those who attended
